
MK11 Mobile Hack Without Verification Souls And Koins

You get over 130 MK11 characters in the game, which is way more than any other game. You can even customize and personalize the characters on your own. At the start of the game, MK11 characters are brand new. Only three of them - "Snake", "Scorpion" and "Raiden" - are classic versions from the previous game. However, if you want, you can start the game with "Ultra" as it is, it will be available from the very beginning, but will not be available at the end of the game. Each of the new characters has their own unique attacks and special moves.

Also for the characters were added new animations of movements.
